

Ferris wheel Rotate

Learning goals

In this lesson, we mainly learn how to control motor by micro:bit and Super:bit expansion board.

Code

```
1 from microbit import *
2 import superbit
3
4 display.show(Image.HAPPY)
5
6 while True:
7     superbit.motor_control(superbit.M1, 255, 0)
8
```

import superbit library;

display.show (Image.HAPPY): Micro:bit dot matrix display smile pattern;

superbit.motor_control (superbit.M1, 255, 0): M1 is the interface on the super:bit board, speed is 255.

About wiring

We need to connect two building block motors to the **M1** interfaces of the Super:bit expansion board.

The black wiring of the motor is near the battery side.

Programming and downloading

1. You should open the Mu software, and enter the code in the edit window, , as shown below.

Note! All English and symbols should be entered in English, and the last line must be a space.

```

1 from microbit import *
2 import superbit
3
4 display.show(Image.HAPPY)
5
6 while True:
7     superbit.motor_control(superbit.M1, 255, 0)
8

```

2. You can click the “Check” button to check if our code has an error. If a line appears with a cursor or an underscore, the program indicating this line is wrong.

```

1 from microbit import *
2 import superbit
3
4 display.show(Image.HAPPY)
5
6 while True:
7     superbit.motor_control(superbit.M1, 255, 0)
8

```

Good job! No problems found!

3. Click the 'REPL' button to check whether the super:bit library has been downloaded. If not, please refer to the [1.preparation before class] ---> [2.How to import Yahboom superbit library] import super:bit library tutorial.

```

Mu 1.0.3 - Ferris wheel rotate.py
Mode New Load Save Flash Files REPL Plotter Zoom-in Zoom-out Theme
Ferris wheel rotate.py ×
1 from microbit import *
2 import superbit
3
4 display.show(Image.HAPPY)
5
6 while True:
7     superbit.motor_control(superbit.M1, 255, 0)
BBC micro:bit REPL

MicroPython for Super:bit V1.1 modified by Yahboom Team
Type "help()" for more information.
>>>
>>> |

```

4. After writing the code, please click the 'Flash' button to download the program to the micro:bit board.

```

Mode New Load Save Flash Files REPL Plotter Zoom-in Zoom-out
Ferris wheel rotate.py ×
1 from microbit import *
2 import superbit
3
4 display.show(Image.HAPPY)
5
6 while True:
7     superbit.motor_control(superbit.M1, 255, 0)

```

If the program is wrong or the experimental phenomenon is wrong after downloading, please confirm whether you have downloaded the superbit library hex file we provided to the micro:bit board.

For the specific method of adding library files, please refer to [【Preparation before class】---【How to import Yahboom superbit library】](#)

Experimental phenomena

After the program is successfully downloaded, open the power, the micro:bit dot matrix will display the "heart" pattern, and the Ferris wheel will rotate with 255 speed.

If you need to start over, press the reset button on the back of the micro:bit board.
